Wireless Paging Solutions For Logistics

Alpha Coaster

Custom Coaster

Transmitters:

T7400A
- Basic paging (flash, beep, vibrate)
- Alpha messaging

T7450A
- Basic paging (flash, beep, vibrate)
- Alpha messaging
- Cell phone notification

T74USB
- Interface with current software
- PC paging
- Basic paging (flash, beep, vibrate)
- Alpha messaging

Improve efficiencies in logistics operations with instant communication

Efficiently controlling the flow of trucks in logistics can result in significant operational gains. LRS' Logistics Paging Solutions allow logistics operators to immediately notify waiting drivers when it's their turn to approach the docking station, no matter where they are located within and near facility grounds. Using alphanumeric messaging, or cell phone notification, drivers can be informed of exactly when and what dock they are to report to.

How it works:

1. Hand out pagers to drivers as they enter the station, before they park and wait

2. Page them from the transmitter when it is their turn to approach the loading dock or check-in area (direct them to a specific loading dock with alpha messaging)

Benefits

- Notify drivers immediately
- Execute loading and unloading processes quickly and efficiently
- Increase accuracy of truck deployment
- Prevent traffic jams caused by vehicles parking for unloading
- Increase productivity and organization
- Eliminate staffing needed to deliver messages to waiting drivers

Features:

- Detailed messaging with alphanumeric text
- Multiple paging modes (flash, beep, and vibe)
- Cell phone messaging
- Continuous paging mode eliminates missed pages
- Weather resistant pagers (coasters)

Custom Applications:

- Integrate the T74USB into your current logistics software for enhanced paging and tracking capabilities
- Monitor and track unloading times and driver response times to improve operational efficiencies.
