

Better Guest Experience with Faster Service

Decrease wait time for food delivery and improve service efficiency to enhance the guest experience.

Faster Service for Guests

Server paging systems helps staff quickly serve guests by notifying them when food orders are ready to be delivered. Keep your servers out of the kitchen and on the floor to tend to guests with the reassurance they won't miss delivering an order. Enhance the guests experience by serving food fresher and faster.

Improve Guest Experience

Servers are quietly notified when the food is ready and are able to deliver food quickly. Servers won't miss orders or deliver food that has been sitting out. No more bells or name shouting.

Empower Servers

Give your servers the tools they need to do the job they were hired to do: serve guests. Server paging keeps staff out of the kitchen area and on the floor serving guests.

Increase Productivity

Server paging limits the time servers spend waiting in the kitchen area for food. Servers are able to use their time more wisely tending to customers.

HOW IT WORKS

- 1 Assign**
Servers receive a numbered, wearable pager.
- 2 Notify**
Kitchen staff press a button from the transmitter to notify servers when food orders are ready for pick up.
- 3 Serve**
Servers return to the kitchen, pick up orders and deliver fresh food to the table.
